Mini Project Plan

Roles: Javier (PM), Isaiah (BA), Caleb (AIE)

Goal: Develop a quick and effective reporting tool for phishing attempts

Milestone 1: Define the problem (BA job)

Milestone 2: Develop the tool (AIE job)

Milestone 3: Make sure it freakin works and overview the project ๓_๓ (PM job)

Acceptance criteria: Must report suspicious emails no more than 5 minutes after viewing them

Risks: Might be legit company email, false alarm

Final pitch outline thingy ma bobber ノ(๖_๖)ノ

Every single day, phishing attacks are only getting more advanced with the emergence of new technologies. This makes accurately detecting phishing attempts harder and harder by the day. To keep our company assets and employees safe, we have created a new phishing tool for detecting and reporting suspicious emails. To use this tool, you simply paste the contents of the email and it will tell you exactly what's suspicious and the overall risk of the email. When you report the email, it is sent to a higher up for investigation into the risk, as well as what may already be compromised. Using this tool, companies can be more aware of phishing attacks as well as quickly mitigate any damage already done by phishing.

Flow Chart

This flow chart outlines how the company identifies phishing risks, reports incidents, and strengthens cybersecurity by improving reporting processes, reducing data-loss threats, and supporting both business and tech teams.

PHISHING RISK OVERVIEW

Problem Statement

Improve reporting to track phishing attempts across the company

Risks

Company Data Loss

Untrained Staff Clicking Phishing Emails

Viruses and Malware

Key Groups Impacted

Business Departments

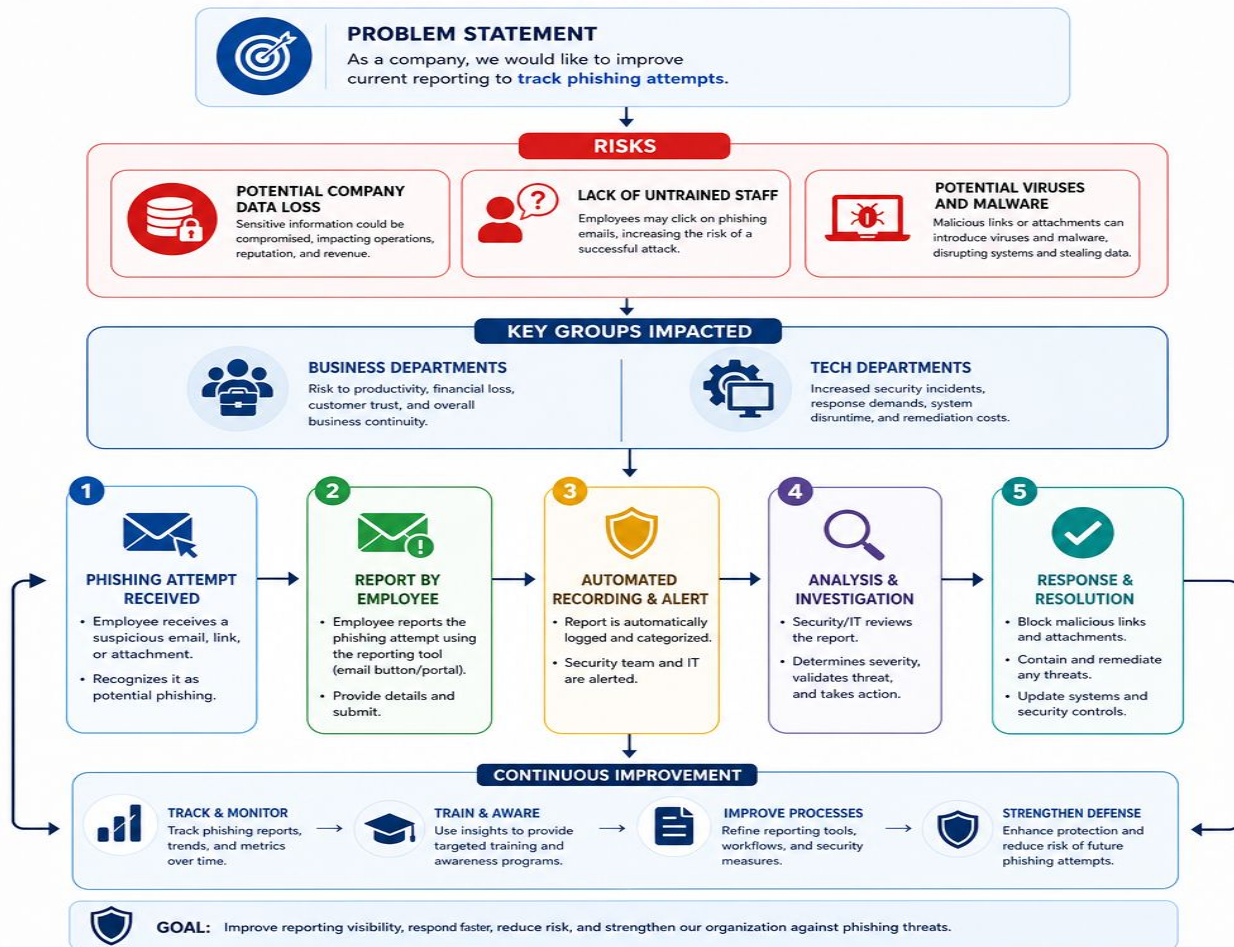

Technology Departments

Process Flow Chart

A streamlined view of how improved phishing-reporting practices reduce organizational risk, strengthen staff awareness, and enhance coordination between business and technology teams.

PHISHING REPORTING PROCESS FLOW CHART

The wireframe

The wireframe gives a clean overview of the company's phishing-reporting challenges. It highlights the main problem, outlines key risks like data loss and malware, and shows which groups are affected. It also maps a simple reporting workflow and ends with recommendations such as training and automated alerts to strengthen cybersecurity.

Code

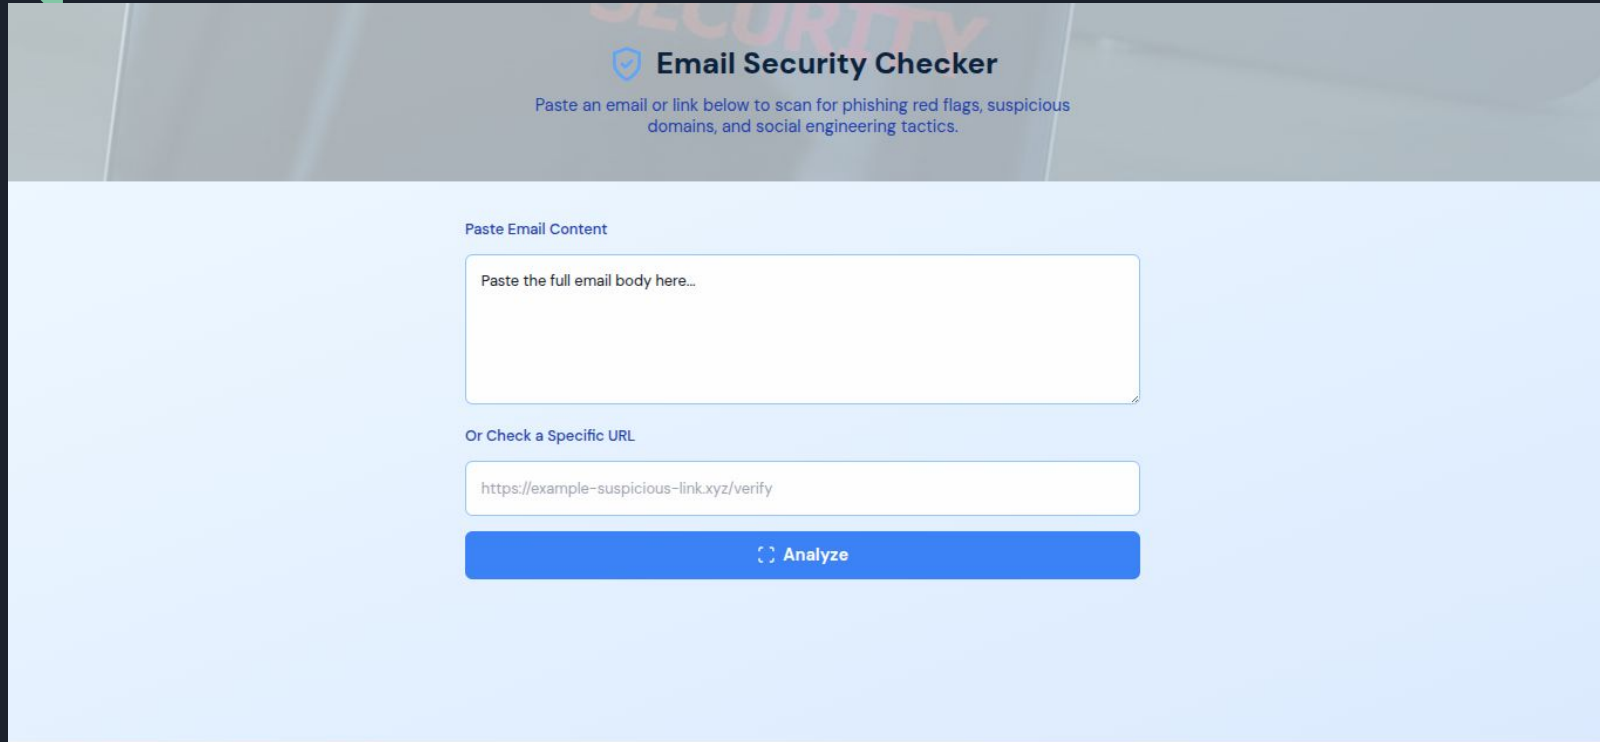

WHITE WIREFRAME	
[Problem Statement]	
As a company, we want to improve current reporting to better track phishing attempts.	
[Risks]	[Impacted Groups]
• Potential company data loss • Untrained staff clicking phishing emails • Viruses & malware from increased phishing attempts	• Business Teams • Technology Teams
[Reporting Process Flow]	
1. Phishing attempt occurs 2. Employee reports incident 3. System logs & categorizes 4. IT reviews & responds 5. Dashboard updates metrics 6. Continuous improvement loop	
[Notes / Recommendations]	
• Increase staff training • Add automated alerts • Strengthen cross-department collaboration	

AI requests, beginning development.

For our first request, we asked ai to; for cybersecurity generate us a plugin/extension/website that will check your emails for unwarranted spam or suspicious phishing links so they can be reported

User interface

The image shows a web application titled "Email Security Checker". The header has a blue and green geometric logo on the left. The main content area is light blue and contains two input methods: "Paste Email Content" with a large text area, and "Or Check a Specific URL" with a smaller text input. A blue "Analyze" button is at the bottom.

Email Security Checker

Paste an email or link below to scan for phishing red flags, suspicious domains, and social engineering tactics.

Paste Email Content

Paste the full email body here...

Or Check a Specific URL

<https://example-suspicious-link.xyz/verify>
